FAMILY ARCHIVING PACKS

GOLD PLATED DATA PROTECTION

The world's highest quality professional archiving and audiophile media is now available in convenient 5 disc starter packs including UV safe **PRODISC** Black Archive Flexicases, archive safe **PRODISC** water based marking pen and convenient user index slicks.

Now all of your precious family photos, video, oral history, music and documents can be safely and securely preserved for generations to come thanks to the government archive tested corrosion proof **PRODISC** 24 karat gold laser reflective layer and fade resistant data recording layer.

PRODISC Systems Australia has for over 15 years supplied professional archiving grade optical media for most Australian and Pacific government archives, libraries, defence, police, national broadcasters and cultural organisations. During this time many millions of hours of priceless history and critical data files have been preserved onto the optically and chemically stable **PRODISC** archival CD-R and DVD-R range without any reported failure in that time. As a physical archival solution safely remote from the threats of computer virus, malfunction and mishap, the 12 cm recordable disc also enjoys continuing support from ongoing technology developments in optical disc formats over the last 20 years. This includes DVD and BLU-RAY, which both provide comprehensive integration, support and backward compatibility for the original CD format of 30 years ago.

PRODISC archival gold non-erasable optical media ensures an archival storage life of 100 to 300 years (critically dependent on storage and handling conditions), at a very modest cost of around 15 cents per Mb or typically 30 cents per family photograph. With 10,000 production lines in 1250 optical disc factories worldwide, producing in excess of 20 billion discs annually, and with playback and recording supported in billions of computers, DVD, BLU-RAY, AUDIO CD and VIDEO CD players, the 12 cm optical disc will surely remain an accessible, popular archival storage solution for many future decades.
